

TEJAS SENTHIL

(817) 821-3580 | tns976@eid.utexas.edu | <https://tejas957.github.io/personal-portfolio>

EDUCATION

The University of Texas at Austin, Austin, TX

May 2029

Bachelor of Science, Computer Science

Relevant Coursework: Data Structures & Algorithms, Discrete Mathematics, Computer Architecture and Organization

SKILLS

Programming Languages: Java, Python, C++, C, JavaScript/TypeScript, ARM64 Assembly

Backend & Infrastructure: Spring Boot, REST APIs, Redis, PostgreSQL, Docker, AWS (EC2), Railway, Node.js, Git, CI/CD

Other: React, Playwright, Claude API (LLM integration), OCR/Computer Vision tooling, Speech-to-Text APIs

PROJECTS

Site Cloner & AI-Powered Editor | *Node.js, Playwright, Claude API*

Aug 2026

- Built a Node.js tool using Playwright to clone live websites, capturing the rendered DOM and assets and rewriting paths for fully offline use.
- Integrated the Claude API to apply natural-language edit requests directly to cloned pages, alongside a designMode-based WYSIWYG visual editor.
- Implemented filesystem-backed undo/redo to support iterative, non-destructive editing workflows.

Rate Limiter & URL Shortener | *Java, Spring Boot, Redis, PostgreSQL, Docker, Railway*

Jul 2026

- Built and containerized (Docker) a URL shortener with a custom rate-limiting layer using a token bucket algorithm, deployed on Railway
- Load tested with hey, sustaining 7,700+ requests/sec at 33ms p99 latency with zero failed requests

chArm-v5 Assembly Lab | *ARM64 Assembly (A64 subset), Linux, AWS EC2*

Apr 2026

- Implemented multiple core functions in a restricted ARM64 (chArm-v5) instruction set to deepen understanding of low-level computation and CPU architecture.
- Built and tested performance of the assembly programs on a Linux-based AWS EC2 VM.

Command Interpreter | *C, POSIX APIs, Linux System Calls (fork, exec, wait), File I/O*

Feb 2026

- Built a Unix-style command-line interpreter in C supporting process creation, execution, and basic shell commands
- Implemented features like input parsing, piping/redirection, and process control using low-level system calls.

EXPERIENCE

Texas Pain Institute, Dallas, TX

May 2026 - Present

Software Engineering Intern

- Built a HIPAA-compliant REST API that turns doctor-patient conversations or photographed intake forms into structured clinical notes after seeing inefficiencies in intake and scribing processes; combines speech-to-text and OCR into a single note-generation pipeline.
- Scraped and cloned the practice's website with Playwright after they lost access to their site builder, reconstructing the rendered DOM as static HTML/CSS, fixing broken elements and updating content, then redeploying it to their existing domain with zero downtime.

Gate Software Solutions, Remote

Dec 2024 - Mar 2025

App Development Intern

- Contributed to a collaborative team building 2 Java-based Android language-learning apps, debugging application issues and shipping new features across the development cycle.

LEADERSHIP & COMMUNITY INVOLVEMENT

Women in Computer Science, Austin, TX

Sep 2025 - Present

Student Volunteer/Event Organizer

- Organized and supported technical community events and hackathons, coordinating logistics and attendee experience for student-focused programming throughout the year.
